

# TONELLO PRESENTS UP: LESS IS MORE

After NoStone® , Water Brush, and Core, denim washing has reached a crucial turning point with UP. This patented technology reduces the liquor ratio to unparalleled levels, saving water and energy and making water filling and draining faster. UP is a revolutionary innovation applicable to all existing Tonello machines, including the least recent. Because Tonello machines do not age, they evolve.

## A NEW VISION FOR THE WASHING PROCESS

UP, the latest Tonello innovation, radically changes garment washing: it dramatically reduces the amount of water required and brings the liquor ratio down to unparalleled levels.

A continuous, regular flow of water is constantly injected into the machine, then recovered and recirculated. Water saving now goes hand in hand with significantly reduced energy consumption and faster water filling and draining. All this obviously translates into lower costs.

The combination with other Tonello technologies, like [ECOfree](#) for ozone washing and [NoStone®](#) for stoneless stone-wash effects, further reduces costs and carbon footprint.

## THE UP TECHNOLOGY

- Dramatically cuts water and energy consumption;
- Reduces processing time;
- Can be installed in all existing Tonello machines, regardless of their age, and is applicable to the dyeing process, giving the same benefits;
- Can be integrated with other Tonello technologies (ECOfree, NoStone® , etc.).

WITH UP, TONELLO CHANGES THE WASHING PROCESS ONCE AGAIN.
